

ABSTRACT OF INVENTION

The present invention discloses a technique for presenting a bill and associated non-bill information via a network. The technique includes transmitting a bill to a payer. The bill includes a first charge and a second charge. The bill also includes a first link to non-bill information and a second link to non-bill information. Non-bill information is information upon which a charge is based. A request for non-bill information is received from the payer. The non-bill information is transmitted to the payer in response to receipt of the request.
